No. $\frac{S.B.}{226}$ of 1889.

From

THE SURGEON-GENERAL WITH THE
GOVERNMENT OF BOMBAY;

To

THE CHIEF SECRETARY TO GOVERNMENT,
GENERAL DEPARTMENT,
Bombay.

Bombay, 20th March 1889.

SIR,

I have the honour to submit, for the information of His Excellency the Governor in Council, the Administration Report on the Lunatic Asylums of this Presidency for the year 1888.

2. During the year no additions have been made to the Asylums. The dietaries of the Colába and Ratnágiri Lunatic Asylums were experimentally changed during the year as sanctioned in Government Resolutions, General Department, Nos. 2959 of 24th September 1887 and 956 dated 24th March 1888; the adoption of the revised Colába diet was formally sanctioned after six months' trial by Government Resolution No. 1600, dated 16th May 1888. The Ratnágiri dietary is still subject to a second six months' trial—*vide* GovernmentResolution No. 4123, dated 22nd November 1888. The whole subject of Asylums dietaries is engaging my attention at present, and I hope shortly to submit proposals for the consideration of Government.

3. The arrangements for supplying water to Colába Asylum are very defective. In Ratnágiri the supply is still inadequate, but proposals are under consideration for improving it. In Ahmedabad the deepening of one of the wells warded off an impending water famine.

4. On the Statements I beg to make the following remarks:

Statement No. I.—The total population of the Lunatic Asylums in 1888 was 949 against 913 in 1887,—an increase of 36. During the year 266 insanes were admitted and 188 discharged, against 242 and 176 respectively in 1887. Of those discharged 72 were cured, 96 improved, and 20 not improved. The daily average strength was 679·3 or virtually the same as in 1887. 541 males and 134 females remained under treatment on the 31st December 1888 against 557 males and 126 females on the same date in 1887. The daily average number of sick shows an increase from 74 to 79. The total number of deaths was 86 against 54, giving a percentage of 12·6 on the daily average strength against 7·9 in the previous year. In Colába the sick rate was 3·5 above the mean of the previous ten years, but not so high as in 1885 and 1886; there were 51 deaths in Colába.

Statement No. II.—22 criminal lunatics were admitted during the year, less by 2 than in the previous year. 7 were discharged and 15 died, leaving 101 under treatment on the 31st December 1888, the same as in 1887. Of those remaining 91 were males and 10 females.

Statement No. III.—Of the 266 insanes admitted during the year 216 were males and 50 females; these are further subdivided by religion and race: 58 Europeans, 7 Eurasians, and 13 Native Christians, 110 Hindus, 61 Mahomedans, and 15 Pársis, and 2 of other castes.

Statement No. IV.—Shows in detail the pursuits of the various insanes before they lost their reason. Soldiers head the list with 45 admissions, then follow 29 traders, 27 labourers, 25 beggars, 22 cultivators, 19 servants, the remainder being of various or unknown occupations.

Statement No. V—Shows that 204 of the 266 insanes were between 20 and 40 years of age; this period of life might with advantage be divided into periods of 5 years. 9 were under 20, and 53 over 40 years of age.

Statement No. VI.—This statement shows the various types of insanity. As might be anticipated, the majority, or more than a third, suffered from acute mania,—334 out of 949; 107 of the 266 admitted during the year suffered from acute mania. Chronic mania and chronic dementia give almost the same number of cases, 199 and 182 respectively of the total under treatment during the year. 44 acute maniacs were cured, 42 improved, and 28 died, giving 13·1 per cent. recoveries and 12·5 improved, as compared with 6·0 per cent. recoveries and 3·5 improved from chronic mania, and 3·8 per cent. recovered and 12 improved amongst the cases of chronic dementia. I may remark that the classification of the different forms of insanity is in accordance with the old nomenclature of diseases, the Government of India not having yet ordered the adoption of the classification of the 1885 Edition of the Nomenclature of Diseases. I would suggest the attention of the Government of India should be called to this.

Statement No. VII.—In this statement we have the different causes of insanity classified in accordance with the recent orders of the Government of India contained in Government Resolution No. 4118, dated 22nd November 1888, General Department. Of the 949 cases treated during the year 388 cases were attributable to physical causes, 94 to moral causes, and in 467 instances the causes are unknown. Of the physical causes 212 cases were due to various forms of intoxicants, 30 to fever, 26 to epilepsy, 10 to effects of the sun, and the others to various causes. 46 cases are traceable to hereditary taint, and in 13 instances the patients had previous attacks.

Statement No. VIII—Shows the number of sick treated in the hospitals attached to the Lunatic Asylums and the diseases from which they suffered. The diseases in this statement are classified in accordance with the revised Nomenclature of Diseases (1885 Edition). The most prevalent diseases were diarrhœa, debility, ague, dysentery, abscess, and epilepsy. Cholera broke out in Colába and Ahmedabad Asylums—13 cases and 8 deaths in the former and 2 cases and 2 deaths in the latter institution. 48 cases and 24 deaths from diarrhœa, and 21 cases and 5 deaths from dysentery occurred in Colába. All the diarrhœa cases at Colába occurred amongst natives and 5 cases with 1 death from dysentery amongst Europeans. The death-rate in Colába has been very high, 51 against a mean of 27·4 on the previous ten years. I am unable to assign any reason for the heavy death-rate at Colába and the extraordinary number of deaths from diarrhœa. The deaths from diarrhœa did not occur during any particular period of the year but were spread pretty equally over the 12 months. The existence of cholera as an epidemic is usually supposed to predispose to diarrhœa, but at Colába fewer cases of diarrhœa occurred during May and June when cholera existed. It may be that a greater number of debilitated patients were admitted, as suggested by Surgeon-Major Parker, but this explanation is not entirely satisfactory. Surgeon-Major Parker's attention has been specially directed to this matter, and I hope that during next year such a heavy mortality will not occur. The water-supply of Colába is extremely unsatisfactory and is a source of much anxiety to the Superintendent in the hot months, but there appears to be no practicable remedy until the water-supply of the city of Bombay is improved.

Statement No. IX—Is the financial statement. The total expenditure, in round figures, was Rs. 1,29,920, as compared with Rs. 1,23,336 in 1887, and Rs. 1,33,858 in 1886. Establishment cost Rs. 27,283, showing a slight increase on the previous year. Superintendence shows an increase of Rs. 1,968 on 1887, having cost Rs. 21,401; this increase is due to the Superintendent of Colába's pay having risen on account of promotion. Diet shows a small saving, as compared with the previous year, Rs. 46,338 against Rs. 46,760 in 1887. Clothing and bedding cost somewhat less in 1888 than in 1887, Rs. 3,082 against Rs. 3,259. Contingencies cost about Rs. 86 more than in 1887. Allowing for Rs. 10,130 received from paying-patients, the net cost to Government was Rs. 1,09,658 against a net cost in 1887 of Rs. 1,05,130; the increase of Rs. 4,528 is accounted for by the increased pay of the Superintendent, Colába, and the construction of padded cells at the same institution. Allowance should be made

for a net profit in the manufacturing department of Rs. 4,060. The receipts from paying-patients shows an increase of Rs. 1,064 on 1887 and net profits in the manufacturing department a decrease of Rs. 94.

The following table shows comparatively the cost of each patient at each asylum for the past three years:

	Daily Average Strength in 1888.	Net Cost.	Cost per Head.		
			1888.	1887.	1886.
		Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Colába	272·3	58,520 15 1	214 14 6	199 6 4	232 13 3
Ratnágiri	54·5	9,743 1 5	178 12 3	218 9 0	348 15 3
Poona	83·1	12,078 5 4	145 5 5	141 12 9	142 9 5
Dhárwár	27·8	6,655 0 7	239 6 2	220 4 7	348 9 4
Ahmedabad	107·6	12,588 14 11	116 15 10	115 14 0	117 0 11
Hyderabad	134·0	10,072 10 3	75 9 2	75 9 2	72 3 9
Total ...	679·3	1,09,658 15 7	.....	.....	.....
Average Daily Strength ...	679·3	.....	161 6 10	154 12 6	175 12 4

It will be observed that at Colába the average cost has been raised as compared with 1887, and this is due to the following reasons:

(*a*) the daily average strength was 272·3 in 1888 against 280·4 in 1887, so that the expenditure was spread over a smaller number of patients; (*b*) there has been a net increase in the Colába Asylum expenditure of Rs. 3,146, due chiefly to the increased pay of the Superintendent, and the construction of padded cells, which caused an increase of Rs. 2,150 in the Public Works charges. It may be mentioned that the diets at Colába cost Rs. 1,242 less than in 1887, due in part to the modified dietary sanctioned in Government Resolution No. 1600, dated 16th May 1888, General Department.

In Ratnágiri Asylum the average cost has been reduced, due partly to this institution being now a going concern and partly to an increased number of patients.

The average cost in Poona has been increased by higher rates for contract diets and petty supplies and to the biennial supply of clothing to the keepers.

In Dhárwár the high average cost per head must always be attributed to the small number of patients which this asylum is constructed to accommodate, *viz.* 28. The establishment would, with a very small increase, suffice for a much larger lunatic population, and inexpensive alterations would enable this asylum to accommodate 50 more insanes. Being situated in a populous district at some distance from any other asylum it will always be desirable to keep this asylum open. Proposals have already been submitted to Government for a reduction in the cost of the present establishment. The diets cost Rs. 45 per head against Rs. 54 in 1887.

In Ahmedabad, the lower average daily strength throughout the year accounts for the slightly increased cost per head.

It will be observed that the net cost of each asylum does not bear a proportion to the average cost per head. Taking Hyderabad with a daily average of 134 as the standard of efficient and economical management, we find that Ahmedabad and Poona, with daily average proportions of 107 and 83 respectively, cost Rs. 2,500 and 2,000 more than Hyderabad. A reference to Statement IX shows also that diets cost, for a smaller number of patients, about Rs. 2,000 more than at Hyderabad, but it must not be lost sight of that the cost of food grains is somewhat lower in Sind than in Gujarát and the Deccan. Clothing and bedding led to a much heavier expenditure at Poona and Ahmedabad (more especially the

former) than at Hyderabad; the expenditure on these items must always vary according to requirements, but as it appears high at both these institutions and also at Ratnágiri, I have addressed the Superintendents on the subject. Contingencies are also heavy at Poona and Ratnágiri as compared with Hyderabad; in Ratnágiri these expenses are likely to be heavy until the grounds, &c., are brought into a proper condition; at both Poona and Ratnágiri water rates of Rs. 155 and Rs. 144, respectively, are included in the contingent expenses; the cost of supplying water by carts to Colába during the hot months was Rs. 256; at the other asylums no water rates are paid.

Statement No. X—Shows the sanctioned establishment of Asylums. The monthly cost was Rs. 4,104-8 as compared with Rs. 4,096-8 in 1887 and Rs. 3,871-8 in 1886.

Statement No. XI—Is the financial statement of manufactures and shows receipts and expenditure on account of manufactures. About half the daily average strength was employed in various occupations, the others being unable for different reasons to perform any task. The total credits amounted to Rs. 6,479 and debits Rs. 2,397, giving Rs. 4,082 as credits on profits; the net profit was Rs. 4,059-15-10.

The following statements summarise Statement No. XII:

Statement No. XIII—Gives particulars regarding criminal insanes. The average daily strength of criminal insanes was 86·4 males and 9·7 females—a reduction of 6·1 on 1887. The nature of the crimes were: theft 20, culpable homicide amounting to murder 56, culpable homicide not amounting to murder 5, suicide 7, voluntarily causing grievous hurt 14, housebreaking 4, mischief and assault 9, miscellaneous offences 8. In the majority of instances the exciting causes of the insane impulse were unknown, but of those that were known 14 were traceable to intoxicants, 4 each to emotional or moral causes and to hereditary taint, and the others to disease.

5. Deputy Surgeon-General Turnbull inspected the Sir Cowasji Jehangir Asylum in Hyderabad and reported it to be well managed by Surgeon-Major Keith. I inspected the Asylums at Colába (Bombay), Ratnágiri, Dhárwár, Poona, and Ahmedabad, and was well pleased with all I saw. All the Superintendents have conducted their duties in a satisfactory manner. When making my inspections I went carefully into the expenditure at each asylum.

I have the honour to be,

Sir,

Your most obedient Servant,

J. PINKERTON, M.D.,

Surgeon General with the Government of Bombay

ANNUAL STATEMENT No. I.

Showing separately the Admissions, Discharges, &c., &c., of Lunatics in the Lunatic Asylums in the Bombay Presidency during the year 1888 and ten previous years.

The capacity of the Colába Asylum for Europeans is, at 104 superficial feet per patient,—for males 35, for females 10.
The maximum number of lunatics confined on any one night was 38 males, 12 females.
* Made over to the care of friends.

Report on the Lunatic Asylums in the Bombay Presidency for 1888.

No. 2064.

GENERAL DEPARTMENT.

Bombay Castle, 28th May 1889.

Letter from the Surgeon General with the Government of Bombay, No. S.B.—234, dated 29th March 1889—Submitting the Annual Administration and Progress Report on the Lunatic Asylums in the Bombay Presidency for the year 1888.

RESOLUTION.—In the Asylum population the only noticeable fluctuation was an increase at Ratnágiri from 43 to 56 patients, with a daily average of 54·5. There is still, however, room for many more patients at this Asylum, while, on the other hand, the Colába, Poona, Ahmedabad and Dhárwár Asylums appear to have been slightly overcrowded, at times during the year, in either their male or female wards. The expediency of transferring patients to Ratnágiri, whenever possible, should be kept in view.

2. As regards the health of the inmates of Asylums the high death-rate at Colába is the only point which calls for special notice. The Surgeon General expresses himself unable to assign any reason for this result, but it would appear that Surgeon-Major Parker, the Medical Officer in charge, is of opinion that a greater number than usual of debilitated patients was admitted. The Governor in Council observes moreover that the increase in deaths, as compared with the previous year's figures was almost entirely under the heads, "cholera" and the closely connected disease, "diarrhœa," and he is aware that cholera prevailed in the City of Bombay throughout the year under review and to a greater extent than in 1887. The water-supply of this Asylum is still unsatisfactory. The Surgeon General should be asked to report exactly how the case stands and whether he can suggest any measures for the improvement of the supply.

3. In accordance with the orders in Government Resolution (General Department), No. 4118 of 22nd November 1888, a new classification of the causes of insanity has now been adopted. A comparison of Statement VII in this report with the similar statement in the report for 1887, shows that in the latter a large number of cases of insanity was attributed to "Gánja" smoking for which the cause now assigned is the use of Bháng. The use of the latter drug accounts for 55 cases, almost all in Hyderabad, and to the use of the former were due 86 cases chiefly in the Colába and Ahmedabad Asylums. In 51 cases, of which 40 were treated at Colába, insanity was attributed to excessive spirit drinking. As usual however the causes could be traced in only a comparatively small proportion of the cases under treatment.

4. The remaining statistics of insanity have been concisely summarized by the Surgeon General and detailed reference to them is unnecessary. The financial results however call for some notice. The figures, Rs. 1,09,659, showing total net cost of the Asylums given in the table on page 3 of the report are on the whole fairly satisfactory, but it is not at all clear how they have been obtained, and the Surgeon General should be asked if they are correct. Moreover, in view of the necessity that now exists for carefully scrutinizing expenditure on Lunatic Asylums it would have been an advantage if the Financial Statement No. IX, though apparently prepared in the usual form, had been further explained in the report. It is not understood for example how the expenditure shown in columns 15—21 "as expenditure on diet, clothing, &c., from the Manufactures Department" was met, as no money was drawn from the Treasury on this account, and there was no obvious means of debiting this expenditure to the receipts —which, however, it is observed, were exactly the same in amount,—given in column 4 under the head of articles manufactured in the Asylums for use therein. This should be explained.

Digitized with financial assistance from the Government of Maharashtra on 11 July, 2017

5. The increase in receipts from paying patients at Colába is observed with satisfaction. The subject is important and should engage the special attention of the Surgeon General. A scrutiny might with advantage be made of the circumstances in which insanes, other than criminals, have been or are in future sent to the Asylums, with a view to taking steps to ensure that those whose confinement has been ordered under the Act at the instance of their friends or relatives are paid for whenever possible.

6. If Public Works charges which are to a great extent of the nature of capital expenditure and do not appear in the civil accounts as a debit to "Lunatic Asylums" are omitted from consideration, and the net cost of each Asylum is obtained, as would appear to be correct—at all events for purposes of comparison—by deducting (1) receipts from paying patients and (2) net profit on manufactures from the actual cash payments during the year, the figures for net cost given in the table on page 3 of the Surgeon General's report will undergo considerable modification, especially as regards the comparatively high cost now shown for the Colába Asylum. As regards the cost at Poona Government observe that considering the small number of patients, the expenditure on "clothing and bedding" was extremely heavy and the attention of the Surgeon General should be invited to the apparent connexion between this fact and the recent application for an increase of the contract grant for this Asylum. At the Dhárwár Asylum, the closing of which has been contemplated, the cost per head was as usual high on account of the small number of patients. Hyderabad, where expenditure consisted of little beyond salaries and cost of patients' diet, continued to be the most economically managed of the Asylums.

J. DE C. ATKINS,
Acting Under Secretary to Government.
